

Mesh Wide-band And Narrow-band Intercom Radio

Mesh wide-band and narrow-band intercom radio integrated radio, through audio conversion, transceiver mutual control or voice gateway, realizes the interconnection between different intercom equipment, such as narrowband intercom system(push to talk over), and Mesh ad hoc network.

Real figure

Schematic

Features:

- MimoMesh/SmartMesh/NBMesh series mesh radio, built-in conversion module or voice gateway
- Can interconnect with all different frequency bands (HF/VHF/UHF, etc.), different technologies (analog/digital/trunking), different standards (DMR/PDT/ public network, etc.), different manufacturers of walkie-talkies(PTT)/ vehicle-based/repeater and other narrowband voice intercom devices
- One-point interconnection, all mesh radios and corresponding intercom systems, intercom (push to talk over each other)
- Multi-point interconnection, multi-area narrowband intercom system, through Mesh ad hoc network, networking intercom (push to talk over each other)
